

ABSTRACT

The present invention includes a removable cover used to isolate a photoconductor drum from at least one other component in a toner cartridge. The drum includes a cylinder coated with a photoconductive substance. Another embodiment of the present invention includes a method of reducing electrostatic charges on the photoconductor drum including the steps of isolating the drum from other components in a toner cartridge with a removable cover, removing the removable cover prior to insertion of the toner cartridge into an image device and inserting the toner cartridge into the image device.
